TECHNICAL SKILLS

Languages: Go, Python, JavaScript/TypeScript, C++, Java, C, SQL, Bash

Technologies & Frameworks: HashiCorp Vault, Kubernetes, Docker, React, Node.js, Django, Supabase, AWS, Azure DevOps, Git

EXPERIENCE

Software Engineer I	Jul. 2024 -- Present
<i>GEICO</i> <i>Go, TypeScript, HashiCorp Vault, React, Kubernetes, Docker</i>	<i>Chevy Chase, MD</i>
• Spearheaded end-to-end design and development of SecretShare, a Slack app for secure one-time secret sharing adopted across GEICO engineering (4,000+ users) with 100+ daily interactions. • Extended SecretShare into a programmatic API-key delivery service for LLM workflows, integrating an MCP-compatible interface with secure one-time retrieval, Vault-backed storage, and auditable access patterns. • Architected and shipped core GEICO Secrets Platform capabilities enabling secure secrets management for 150+ engineering teams across the organization. • Built production-grade Vault integrations for JWT/OIDC auth, token caching/refresh, response wrapping, and least-privilege secret access across internal developer tooling. • Developed full-stack features with Go services and a React UI, deploying through Kubernetes and Azure DevOps CI/CD with automated TLS certificate management.	
Fullstack Software Engineer Intern	May 2023 -- Aug. 2023
<i>Flow AI</i> <i>Python, ReactJS, SQL, Django, AWS</i>	<i>Austin, TX</i>
• Increased system throughput by 29% by engineering a Python/Django load-balancing solution supporting 1,200+ daily API requests with zero interruptions. • Optimized SQL queries to reduce data retrieval time by 14%, improving workflows for 7 sales agents. • Supported service migration to AWS, improving reliability to 99.5% uptime and projecting an 11% reduction in server costs.	
Software Engineer Intern	Jun. 2022 -- Aug. 2022
<i>Leidos</i> <i>Python, Kornshell, Bash, Docker</i>	<i>Gaithersburg, MD</i>
• Modernized a legacy API backend, improving response time by 26% and reducing technical debt through refactoring and automation. • Built Python-based parallel tracking to monitor 1,900 aircraft simultaneously, improving real-time decision support for en route controllers. • Coordinated a zero-downtime migration across four teams with structured rollout communication for 300+ users.	

EDUCATION

University of Illinois Urbana-Champaign	Aug. 2023 -- May 2024
<i>M.S. Computer Science</i>	
University of Illinois Urbana-Champaign	Aug. 2020 -- May 2023
<i>B.S. Computer Science; GPA: 3.7/4.0</i>	

PROJECTS

VarCapsule GitHub Live <i>React, TypeScript, Supabase, Vercel, Resend</i>	2026
• Built and deployed a digital time capsule app for sealed messages, private archives, email sharing, OTP verification, and scheduled notification emails. • Designed server-enforced locking with Supabase Postgres views, RLS policies, and RPC functions so sealed capsule contents are redacted until the unlock date.	
FitCheck GitHub <i>JavaScript, Chrome MV3, Node.js, Firecrawl</i>	2026
• Built a Chrome extension that analyzes fashion product pages and returns personalized fit-risk scores and size recommendations using measurements, brand history, and web evidence.	
NutriGenie GitHub <i>OpenAI API, LlamaIndex, RAG, Python</i>	2024
• Developed a retrieval-augmented nutrition assistant that generates deficiency-aware dietary guidance from indexed nutrition sources with cited responses.	
BrawlMetric GitHub <i>React, Node.js, MongoDB, API Integration</i>	2024
• Built a Brawl Stars analytics dashboard with player lookup, stat tracking, leaderboard views, and recommendation workflows powered by external game API data.
