TECHNICAL SKILLS

Languages: Go, Python, JavaScript/TypeScript, C++, Java, C, SQL, Bash

Tech: HashiCorp Vault, Kubernetes, Docker, MCP, React, Next.js, Node.js, PostgreSQL, AWS, Azure DevOps

EXPERIENCE

Software Engineer I

Jul. 2024 – Present

GEICO | *Go, TypeScript, HashiCorp Vault, React, Kubernetes, Docker*

Chevy Chase, MD

- **Spearheaded end-to-end design and development** of SecretShare, a Slack app for secure one-time secret sharing adopted across GEICO engineering (4,000+ users) with 100+ daily interactions.
- Extended SecretShare into a programmatic API-key delivery service for LLM workflows, integrating an MCP-compatible interface with secure one-time retrieval, Vault-backed storage, and auditable access patterns.
- Architected and shipped core GEICO Secrets Platform capabilities enabling secure secrets management for 150+ engineering teams across the organization.
- Built production-grade Vault integrations for JWT/OIDC auth, token caching/refresh, response wrapping, and least-privilege secret access across internal developer tooling.
- Developed full-stack features with Go services and a React UI, deploying through Kubernetes and Azure DevOps CI/CD with automated TLS certificate management.

Fullstack Software Engineer Intern

May 2023 – Aug. 2023

Flow AI | *Python, ReactJS, SQL, Django, AWS*

Austin, TX

- Increased system throughput by 29% by engineering a Python/Django load-balancing solution supporting 1,200+ daily API requests with zero interruptions.
- Optimized SQL queries to reduce data retrieval time by 14%, improving workflows for 7 sales agents.
- Supported service migration to AWS, improving reliability to 99.5% uptime and projecting an 11% reduction in server costs.

Software Engineer Intern

Jun. 2022 – Aug. 2022

Leidos | *Python, Kornshell, Bash, Docker*

Gaithersburg, MD

- Modernized a legacy API backend, improving response time by 26% and reducing technical debt through refactoring and automation.
- Built Python-based parallel tracking to monitor 1,900 aircraft simultaneously, improving real-time decision support for en route controllers.
- Coordinated a zero-downtime migration across four teams with structured rollout communication for 300+ users.

EDUCATION

University of Illinois Urbana-Champaign

Aug. 2023 – May 2024

MSc. Computer Science

University of Illinois Urbana-Champaign

Aug. 2020 – May 2023

BSc. Computer Science; GPA: 3.7/4.0

PROJECTS

Runman + **RunCoach** | *TypeScript, Node.js, MCP, PostgreSQL, React, Vercel*

2026

- Built and deployed a Strava training-analytics platform plus RunCoach, an MCP server exposing its fixture-tested TypeScript science core as five LLM-callable tools over RLS-enforced Postgres and hashed per-athlete API keys.

Long Box | *Next.js, TypeScript, PostgreSQL, Supabase, Tailwind*

2026

- Built an explainable comic reading-path engine turning multi-character queries into ranked entry points, with ComicVine data normalized into Postgres, set intersection in SQL, and inspectable ranking reasons.

varCapsule | *React, TypeScript, Supabase, Vercel, Resend*

2026

- Built and deployed a retro-styled digital time capsule app with server-enforced locking: Supabase views, RLS policies, and RPC functions redact sealed contents until the unlock date.
